1. The Response to the Office Action submitted on November 14, 2005 has been received.
2. The drawing correction submitted on November 14, 2005 has been received.
3. The drawings are objected to because in Figure 7C, Figure 7D and Figure 7F, the notation " $V_b = V_s = -10V$  or floating" should be deleted because in these three figures, the voltage  $V_b$  either varied or positive. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.
4. The following is an examiner's statement of reasons for allowance:

The closest prior art to the present invention is Sato (U.S. Patent No. 5,576,995). Sato disclosed an erasing method which injecting electrons to the floating gate, and a programming method which releasing electron from the floating gate. Sato failed to show or suggest the steps of evaluating a read current generated in response to the voltage bias to determining whether a level of gate threshold voltage is reached, and repeating the processing sequence a number of times by varying one or more time the voltage bias between the base and the gate until the level of the gate threshold voltage is reached and the memory cell is in an erase state as claimed in claims 1-12. Sato also failed to show or suggest the steps of setting the memory cell to an initial state of a first threshold voltage, applying a voltage bias between a first junction region and a gate to cause electric hole to migrate towards and be retained in the trapping layer, evaluating a read current in response to the voltage bias to determine whether a second gate threshold voltage is reached, wherein the second gate threshold voltage is lower than the first threshold voltage, and repeating the processing sequence a number of times by varying one or more time the voltage bias between the gate and the first junction region until the second gate threshold voltage is reached and the memory is in a program state as in claims 13-22.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
